KasiBook: Sprint Backlog (Sprint 4)

Somila Ndoboza | Entrepreneurial WIL Project | Project Presentation 3 portfolio

About this sprint backlog

A sprint backlog is the part of the product backlog that the team commits to in one sprint, together with the tasks needed to deliver it. This one covers Sprint 4: ranks 13 to 16 of the product backlog. The sprint goal below was written from the four stories, because the Trello board did not record a goal for the sprint.

Sprint	Sprint 4
Sprint goal	Deliver secure accounts, editable business profiles and appointment scheduling, on an app that loads quickly on low-data connections.
Work items	4 user stories (one per day, Day 1 to Day 4), each broken into 3 tasks: 12 tasks in total
Source	The team's Trello board, Sprint 4 list; story and task wording as in the User Stories and Tasks document

Sprint 4 stories and tasks

Day	User story	Task	Status
Day 1	**US-4.1 Performance on low-data connections** As a user, I want the application to load quickly on low-data connections, so that I can use the services smoothly without delays.	Optimise image assets, add lazy loading and compress static media	Complete
		Minify CSS and JavaScript bundles and remove unused code dependencies	
		Add browser caching and reduce the size of API request payloads	
Day 2	**US-4.2 Registration and login** As a business owner or customer, I want to register and log in securely, so that my account data and bookings remain safe.	Build the registration and login forms with real-time input validation	Complete
		Implement the authentication API integration and secure session handling	
		Design the password recovery screens and sign-in feedback notifications	
Day 3	**US-4.3 Business profile and settings** As a business owner, I want to set up and edit my business details, so that customers see accurate operating hours and service information.	Build the profile form for operating hours, location and contact information	Complete
		Implement the profile update endpoints and save the changes to storage	
		Design the business profile header, the logo upload and the quick settings toggles	
Day 4	**US-4.4 Booking and appointment scheduling** As a customer, I want to select available dates and time slots, so that I can schedule appointments directly with local vendors.	Build the interactive calendar and time-slot selection interface	Complete
		Implement the availability check that prevents double bookings	
		Create the appointment summary confirmation and checkout steps	

Status shows the status of each story card on the Trello board on 29 October 2026.
